Smart Switch Module

Product Size:

Available Options:

0-10V  
Dimmable

Triac  
Dimmable

On / Off

## SMART BUILDING PROJECTS

### Building automation

New control and automation systems, from lighting to heating/cooling to security, are about to make homes and offices a lot smarter. Bluetooth mesh networking supports these smart buildings, enabling tens, hundreds or even thousands of wireless devices to reliably and securely communicate with each other.

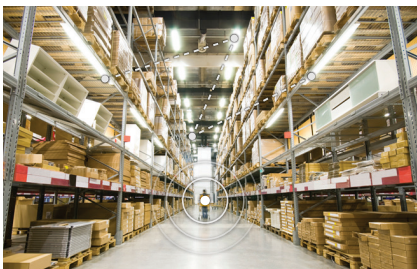

### Wireless sensor networks

The wireless sensor network (WSN) market is growing fast. Especially in industrial WSNs (IWSN) where many companies are making significant cost and efficiency improvements to existing WSNs. Bluetooth mesh networking is designed to meet the strict reliability, scalability and security requirements of IWSNs.

### Asset tracking

Capable of supporting broadcast topology, Bluetooth LE became an attractive alternative for asset tracking over active RFID. The addition of mesh networking lifted Bluetooth LE range limitations and established the adoption of Bluetooth asset tracking solutions for use in larger and more complex building environments.
